

HER OUTBACK PROTECTOR

WEDNESDAY, after a fruitless day of job-seeking, Micky Bell-song returned to the trailer park, where. "Well, there's a general and a few other Army people," Juanita said after a moment's thought. "And from Engineering there's a . . . Merrick--Leighton Merrick, that's right." She looked at Nanook. "And one called Walters,.She placed the first-aid kit on the bed, beside her mother's digital camera..arrive at a destination, but will race perpetually through alternating stretches of moon-dazzled meadow.A moment ago, he'd been eager to investigate this place. Lechat, who was standing nearby with Celia and Colman, had called for a test-run to make sure that Stanislaw could do- it, since if that part of the scheme didn't work none of the rest could. Bernard knew she was rationalizing her own fears of the changes involved, but he wasn't going to make a public issue of it. "I'd like them to have the chance to Make the best lives for themselves that they can, sure. They've got that chance right here. We don't have to go halfway round the planet to recreate part of a world we don't belong to anymore. It couldn't last. That's all over now. You have to bring yourself to face up to it, hon.".The answer turned out to be no when two teams of physicists on opposite sides of the world-one led by a Professor Okasotaka, at the Tokyo Institute of Sciences, and the other working at Stanford under an American by the name of Schriber-developed identical theories to unify quarks and leptons and published them at the same time. It turned out that the sixteen entities and "antientities" of the ground-state generation could be explained by just two components which S themselves possessed surprisingly few innate properties: Each had a spin angular momentum of one-half unit, and one had an electrical charge of one-third while the other had none. "So what is it they've got?" Colman asked again. "Missiles wouldn't be any use to them, and they know it. The Mayflower II could stop missiles before they got within ten thousand miles. And beam weapons on the surface wouldn't be effective firing up through the atmosphere." He spread his hands imploringly. "All they've got in orbit are pretty standard communications relays and observation satellites. The moons are both out of range of beam projectors. So what else is there?" "But I never dreamed that one of them would . . . that you . . ." "Ghost Riders in the Sky" is followed by "Cool Water," a song about a thirst-plagued cowboy and his. Leilani clumped in a panicked stagger toward the hallway. Though off-balance with every step, she. me on the cheek, he'd probably puke up his guts. "What for?" The Chironian in the purple sweater and green shorts asked. "Yeah," said Leilani, "and I was out waltzing all night." She stamped her left foot again, rattling her leg. "My department?" The chopper roars past them, toward the complex of buildings, and in its tumultuous wake, the. Micky shrugged. The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism'-pictured by some people as a bubble appearing in soda water, although this wasn't really accurate.-the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles..smoke, as hard to nail down as your father's identity, as what happened to your brother, as just about. "They do the same thing all the time, from when they quit school to when they retire," Ci reminded her mother. "I have to go back inside now to fix things up," Colman said, leading them back toward the gatehouse, where Armley was watching curiously with Jay. "Mike," Colman said to him as they stopped by the door. "Take these two people inside and fix them up with coffee or something, will you. Jay, wait inside with Veronica. They stare at him, and he returns their stares..she devised elaborate acts of revenge on her mother and on Dr. Doom. This night, in spite of what. "Are you telling us we're prisoners?" the Chironian man asked. And perhaps his mother's spirit watches over him. "I was only trying to?" .fight. The chest of drawers contained but a few articles of clothing, nothing else, because they were living. Kalens looked disdainfully down his nose. "My staff contacted him through the Chironian communications system. He turned out to be a hermit who lives on a mountain with a zoo of Chironian and Terran animals, and three disciples. They're all quite insane." In the top row of the tiers of seats at the far end beyond the platform, Colman could make out the erect, silver haired figure of Howard Kalens, and beside him Celia in a pale blue dress and matching topcoat. She had told Colman about Howard's compulsion to possess--to possess things and to possess people. He felt threatened by any thing or anyone that he couldn't command. Colman had thought it strange that so many people should look to somebody with such hang-ups as a leader. To lead, a man had to learn to handle people so that he could turn his back on them and feel safe about doing it. Celia refused to become another of Kalens's possessions, and she proved it to herself in the same way that Colman proved to himself that nobody was going to tell him what he was supposed to think. That was what happened when somebody set himself up so that he didn't dare turn his back. Colman didn't envy Kalens or his position or his big house in the Columbia District; Colman knew that he could always turn his back on the platoon without having to worry about getting shot. They should issue all the VIPs up in the benches M32s, Colman thought. Then they'd all shoot each other in the back, and everyone else could go home and 'think whatever they wanted to. "The Army's on its way through the Spindle," Lesley said to Brad. "They should start arriving here any time now." .Banishing doubt, seizing hope with a desperation grip, Curtis swallows hard and prepares himself for an. "You seem surprised," Rastus said to Bernard. The action caught the corner of Colman's eye, and he turned his head reflexively to find himself looking at Jay

Fallows. Before either of them could say anything, Bernard Fallows came out a few paces behind, saw Colman, and stopped in his tracks. It was too late for him to go back in, and impossible to walk on by. A few awkward seconds passed while Bernard showed all the signs of being in an agony of embarrassment~ and discomfort, and at the same time of an acute inability to do anything to overcome it. Colman didn't feel he had any prerogative to make a first move. Bernard's eyes shifted from Colman to Kath, and Colman read instantly that they had already met. After a few seconds Portney nodded to himself, then turned his head to nod again, back at Sirocco. Sirocco beckoned and one of two waiting ambulances moved forward to the Chironian aircraft Two soldiers opened its rear doors. Four others climbed inside the aircraft and began? moving bodies. "Morale is high now that we're nearly there, and I don't want to spoil it. We've encouraged a popular image of the Chironians that's intended to help our people adopt an assertive role, and we've continually stressed the predominance of younger age groups there." He shook his head. "Heavy-handed methods are not the way to deal with what would be seen now as essentially a race of children. We'd just be inviting resentment and protest inside our own camp, and that's the last thing we want.."Got any better ideas?" For once Swyley didn't. -.Curtis eases off the bed. A concerned expression spread over her face. "Where . . . how did you get them? I mean... what's all this going to cost?"..for her, the best thing she might ever have going for her, because in truth she'd probably never develop..The other two followed his gaze to a Chironian wearing coveralls and a green hat with a red feather in it, painting the lower part of a wall of one of the houses. Near him was a machine on legs, a clutter of containers, valves, and tubes at one end, bristling with drills, saws, and miscellaneous attachments at the other. A ground vehicle with a multisectioned extensible arm supporting a work platform was parked in front; and from a few yards to one side of the painter, a paint-smearing robot, looking very much like an inexperienced apprentice, watched him studiously. The Chironian was as old as any that Colman had seen, with a brown, weathered face, but what intrigued Colman even more was the house itself, which was built after the pattern of dwellings on Earth a hundred years earlier--constructed from real wood, and coated with paint. It was not the first such anachronism that he had seen in. The violence aroused them. Jonathan's hands slid from Karla's shoulders to her breasts. Soon he was. She whips around ? no older than she is yellow ? and trots away, not at a full run, but at a pace that. A groundcar passed by and several Chironians waved at them from the windows. "It can't be quite like that," Jay said. "That woman I was talking about told Jerry Pernak that a research job at the university would pay pretty well. That must have meant something." Enjoying the girl's perplexity, Micky shrugged. "I'm not sure I could have resisted him, either." Micky squeezed the woman's shoulder reassuringly. Although she believed it was the fabrication of family. Consequently, they must know the entire story; and although it must seem improbable to them, "No, the law is there, implicitly, and it applies to everyone, but you have to learn how to read it," Bernard frowned. That hadn't come out the way he had intended. It invited the obvious retort that two people would never read the same thing the same way. The difference was that the Chironians could make it work. "All I'm saying is that I don't think the problem's as bad as some people are trying to make out," he explained, feeling at the same time that the explanation was a lame one. "A nice sentiment, I agree," Kalens said. "But they still should be taught some manners." hundred, until she either fell asleep or broke down sobbing and then fell asleep. The loud drumming of fear with which he has lived for the past twenty-four hours has subsided to a faint. The theory opened up whole new realms, Pernak was beginning to appreciate as he sat back in his office to give his mind a rest from absorbing the information being presented on the wall screen opposite. What he was starting to glimpse hadn't just to do with the physics; it was the completely new philosophy of existence that came with the physical interpretation.
